

Exercise 5

Thursday, November 26, 2020 6:47 PM

Spaceship is moving
close to c , and emitting
2 light beams. ↓

This is seen
from the frame ref. of the planet
and spaceship

3. I think I would simply see a spaceship, which emits two lightbeams and see them flying relatively close to same velocity. Just like I would look to a highway, and see three car driving in a constant velocity, however two of them driving a bit faster than the one.
